ObjectARX allowed C++ developers to create native AutoCAD components or native AutoCAD plugins. As the DWG file format is proprietary, the ability to view DWG files or to convert the files to PDF is also difficult without the use of special third-party products. I have a plan for how I want the software to evolve with this feature and I'm happy with how it will look with a certain version of the software. However, a lot of people want to use it (I don't know if I can get any numbers though) so I need to release a version soon. How should I proceed? The only way I see it is to go through with the development release and hope that the momentum for this feature will take it further. But there is also the alternative of having the feature with a specific version number
