----- Screen Shot is a small Windows application whose purpose is to help you take screenshots so you can capture essential parts from your projects. Minimalistic looks You are welcomed by a small panel that embeds several configuration settings to tinker with. The program lets you choose the desired capturing mode, open up the folder that stores the snapshots, close the application, access the configuration settings, and view the Help panel. Different

capturing modes and exporting options Screen Shot gives you the possibility to take screenshots in a full screen mode, capture objects (e.g. window, control, windows shortcut menu), or manually select the area with the aid of a rectangle. The images can be exported to PNG, JPEG, BMP, GIF, or TIFF file format. Configuration settings The tool lets you pick the destination folder, enable or disable the small window from where you can access the program's features, run the utility at Windows startup, and automatically receive

---

notifications if updates are available. When it comes to image capturing settings, you can make the application save the screenshot to a file or copy it to the clipboard, so you can easily paste it into other third-party programs, save the image manually or automatically, play sound notifications, and include the mouse cursor. Additionally, you can pick the default output format for the automatic mode, alter the JPG quality, and assign hotkeys for a better control over the entire process. Bottom line All in all, Screen Shot proves to be an

Approximate size of Screen Shot: 112.8 KB Smart Snipping is a program that helps you take screenshots with a couple of clicks. Its intuitive interface and numerous configuration options make it a great tool for quickly taking snapshots, even when you are working in the middle of a project, and exporting them to your PC or to social media. The application can capture several windows simultaneously, set automatic snap or manual trigger, capture objects on the screen, and can even add gradient effects to the screenshots.

---

Smart Snipping lets you take screenshots using the following settings: Screenshot a single window, or the entire screen (current or a predefined workspace). Set up the capture speed to save the picture. Capture objects like lists, buttons, menus, or toolbars. Add watermarks, and also change the image's quality and optimize its color and contrast. Add gradient effects to the snapshot. Export to JPG, PNG, GIF, BMP, and TIFF. Smart Snipping
