Download U4X V1.50 or later and use Xpadder (. Surgical decision making in complicated appendicitis. The purpose of this study is to determine if clinical presentation influences the timing of surgery in patients with complicated appendicitis. Patients with complicated appendicitis were studied from January 1, 1987, to December 31, 1996. Patients with gangrenous appendicitis and perforated appendicitis (but no abscess) were included. Patients were separated into the following three groups (a) early surgical (group I, n = 138), (b) early laparoscopic (group L, n = 171), and (c) late (group N, n = 77). Demographics were similar. Group I was significantly younger than group L. Intra-operative findings were similar. Peritoneal cultures grew Pseudomonas aeruginosa in 5.8% in group I, 11.9% in group L, and 2.6% in group N. Postoperative data are as follows: wound infection developed in group L (2.6%) and was self-limited in group N (1.3%). Erythema nodosum developed 6d1f23a050
